Summary

Motivation and Challenges

Motivation

- E-participation is major element of future smart cities
- People engage in *participatory processes*, e. g., formal and informal planning and decision processes
- Smart cities benefit from the knowledge of the masses
- Proper tools needed for participation

Challenges

1. Data complexity, e. g., various data types and inherent interconnectedness
2. Understanding users' needs and tasks during participation
3. Interface for presenting and working with the data

Graph-based Data Model

Data Example

Type	Attribute	Value
<i>Document</i> 	Filename	goals.pdf
<i>Map</i> 	Dataset name	saxony_anhalt_12
<i>Map marker</i> 	(x,y)	(51.746, 11.983)
	Label	M3
<i>Comment</i> 	Timestamp	20160623 T 09:31:01 UTC
	Content	I don't agree. Too expensive!
<i>Image</i> 	Size	88 KB
	Dimensions	1363 × 667
<i>Rating</i> 	Author	Joe Blow
...

Data Representation

- Graph $G = (N, E)$ with N set of nodes and E set of edges
- $n \in N$ is a specific entity with arbitrary attributes
- $e = (n_1, n_2) \in E$ is a directed relationship with $n_1, n_2 \in N$

Two main approaches for graph *initialization* and *evolvment*

1. Automated or semi-automated methods

- Regular expressions for matching patterns, e. g., textual references like “§ 437 BGB” (German Civil Code)
- Information extraction and coreference resolution algorithms, considering natural language text, e. g., “I received your letter from last Monday”

2. Manual, interface-supported interaction

- User-driven control mechanism for error correction
- Create and connect new contributions to existing data

Interaction Tasks

Data Exploration

Category	Subtask
<i>Explore</i>	Inspect online Download data Scroll content Directly navigate Pan or zoom views in GIS
<i>Select</i>	Select / deselect single content Select / deselect multiple content
<i>Reconfigure</i>	Sort items Enable / disable layers
<i>Abstract</i>	Examine / hide details
<i>Connect</i>	Combine information
<i>Filter</i>	---

Category	Subtask
<i>Compose</i>	Write text
	Style text
	Attach data
<i>Add</i>	Send data
	Save draft

Graphical User Interface

Summary

Final Remarks

- E-participation produces complex data
- Graph easily describes different entities and relations
- Data exploration and editing tasks are foundation for interactions
- Conceptual idea of a graphical user interface for participation is currently in implementation phase

Thank you very much!
